

APPLICATION DEVELOPER VEHICLE PRODUCTION (m/f/d)

Together with us, you shape the future of automotive production offering our customers true value with our solutions. As a Production Application Developer, you will design, develop and integrate system solutions and test programs for vehicle commissioning during or after production, based on our products that our customers can rely on to ensure their first-class product quality.

Your Tasks

As part of the team, you develop innovative solutions, e.g. for the electronic testing of control units and the optimization of processes on site using big data analysis.

You create workflows for highly automated testing, calibration and data supply of vehicle electronics.

You work in our authoring environment in a Java-based programming language with graphically modeled program parts.

Our Offer

An interesting working environment in a motivated, creative development team

Up-to-date topics and development tasks in the field of the automotive future

An attractive customer environment within the international automotive industry

Challenging and different activities with opportunities for individual development

Room for creativity and short communication processes in a flat hierarchy

Your Profile

You have successfully completed a degree in a technical field (FH/TH) or have an equivalent qualification.

You have good programming skills, preferably in an object-oriented programming language such as Java, C++, C#.

You are fluent in written and spoken English.

You are an absolute team player who achieves your greatest successes through collaboration with your team members.
