You create innovative software solutions around the latest vehicle technologies—depending on your personal interests in the areas of authoring and runtime systems, backend web development or microservices.

**Your Tasks**

You demonstrate your creativity and innovative strength by developing future-oriented technologies for the automotive industry while enjoying your creative freedom.

With team spirit and drive, you search for new ways to make our products even better and thereby to further increase the quality and reliability of vehicles.

**Your Profile**

A degree (B.Sc./M.Sc.) in computer science or a comparable qualification

First experience in object-oriented software development with Java

Basic knowledge of some of the following frameworks and technologies:
- Eclipse RCP, SWT,
- RESTful APIs, Spring, Hibernate
- SQL and/or NoSQL databases

Knowledge in dealing with version management systems, e.g. GIT, SVN

Enthusiasm in the automation of build and deployment processes, e.g. with Jenkins, Maven, Docker, JUnit

**We Offer You**

An interesting work environment in a highly motivated, creative developer team

State-of-the-art topics and development tasks in the field of the automotive future

An attractive customer environment from the international automotive industry

Exciting and varied activities with individual development opportunities

Creative leeway and short communication channels in a flat hierarchy

---
