

SOFTWARE DEVELOPER BACKEND (m/f/d)

For our backend as the core of our vehicle diagnostic systems in automotive production, you will integrate existing customer applications and operating processes. In this way, you support us in meeting the highest requirements for availability and reliability of the system for our customers, the renowned big companies in the automotive industry, worldwide.

Your Tasks

- In our agile and dynamic team, you develop high-quality, future-proof backend solutions.
- You will take on a wide range of tasks, starting with defining requirements with our customers.
- Based on this, you design the appropriate solutions and take over the implementation of new functions, customer-specific extensions and interfaces.
- You design and configure the associated infrastructure, such as the operating system, virtualization, etc.

Your Profile

- You do have a university degree (B.Sc./M.Sc.) in the field of computer science or a comparable qualification.
- You bring knowledge in software development, ideally in C/C++, Python, Java.
- You are eager to make databases like ORACLE or PostgreSQL your topic.
- Ideally, you already have experience with Ansible, Linux Enterprise operating systems or virtualization and containerization.
- You are open to getting familiar with new technologies and to expanding your professional skills.
- Of course, you have a good skills of written and spoken English.

Our Offer

- An interesting work environment in a highly motivated, creative developer team
- State-of-the-art topics and development tasks in the field of the automotive future
- An attractive customer environment from the international automotive industry
- Exciting and varied activities with individual development opportunities
- Creative leeway and short communication channels in a flat hierarchy
