

SYSTEM ENGINEER EUROPE (m/f/d)

You shape quality and reliability in automotive production with us. You are on site as the direct contact person for the technical support of our customers and take on demanding system integration projects. As a link between our development engineers and our customers, you contribute significantly to the continuous optimization of our system solutions.

Your Tasks

As part of our dynamic team, you are involved in the realization of sophisticated software solutions of the future.

You develop test and coding processes for vehicle electronics and create highly automated solutions.

With your know-how, you put innovative diagnostic systems into operation and train customers on our software and hardware.

You search for new ways to efficiently implement processes, testing and system integration, and actively shape tomorrow's automotive production.

We Offer You

A detailed job training and interesting work environment
State-of-the-art topics in the field of the automotive future

An attractive customer environment from the international automotive industry

Exciting and varied activities with individual development opportunities

Creative leeway and short communication channels in a flat hierarchy

Your Profile

You have a degree in engineering (FH/TH), electrical engineering, computer science, mechatronics or a comparable qualification.

You bring programming skills, e.g. Java, C ++.

You are characterized by high willingness to travel within the European area and distinct intercultural competence.

Your good organizational talent and your independent mode of operation complete your profile.

You convince with good communication and presentation skills.

You have a class B driver's license.

Good written and spoken English are a matter of course for you. Knowledge of a further foreign language is desirable.
